**ABSTRACT OF THE DISCLOSURE**

~~The invention relates to a~~ A method of driving an LCD is presented, comprising ~~The method includes~~ providing an array of pixels, ~~characterised by the steps of providing~~ cholesteric Cholesteric liquid crystals arranged between spaced transparent substrates, and ~~by providing a reset pulse and a plurality of many selection pulses are also~~ provided, resulting in whereby to provide resultant driving waveform(s).

~~Thus the driving schemes or methods shown consist of a reset phase and a selection phase, the pulses of the latter being equipped with freedom in the multiplicity of the selection pulses. These schemes provide gray scale capability and improved optional performance. Inversions of waveform are used.~~
